AGUA FINITA | The Finite Water City　有限水城

Overall study
- Reserve 959 km²
- Agri-production 482 km²
- Energy + compute 186 km²
- Living + public life 27 km²
- Trade + port 2.20 km²
- Industry + automation 1.10 km²
- Site boundary (1,656 km²)
- Pilot area - fixed, not designed
- Master design area
- Seasonal channels (DEM-derived)
- Key nodes

Summary

A whole-site network of four conditional towns, productive energy/compute corridors and an eastern gateway grows only with verified water. Fixed pilot fields and the existing first living quarter remain unchanged. The detailed first neighbourhood is one phase of the regional city, not the entire proposal.

Declared trade-off

Maximum uninterrupted compute throughput and minimum cooling electricity. Why: Scarce water is reserved first for people and the existing agricultural system.. Who bears it: Compute investors and customers accept interruption contracts; tenants are protected by reserved service funding, while workers need paid reassignment during curtailment.

N05 A compute campus and its waste heat

N07 A seasonal river park

N10 Public space in heat and Zonda wind
