AGUA FINITA | The Finite Water City

cover-render-v5 · OpenAI built-in image generation; exact model version not exposed from renders/city-aerial.png · illustrates the geometry, not evidence

The scheme

A whole-site network of four conditional towns, productive energy/compute corridors and an eastern gateway grows only with verified water. Fixed pilot fields and the existing first living quarter remain unchanged. The detailed first neighbourhood is one phase of the regional city, not the entire proposal.

2,400	**1,200**	**12**	**1,000,000**
residents, phase one	jobs in the city	MW of compute	m³ of water a year
62	**41**	**7**	
% hourly carbon-free	km² master design	human-machine interfaces	

Key nodes: A03 Public space in heat and Zonda wind · B03 A compute campus and its waste heat · C03 A seasonal river park

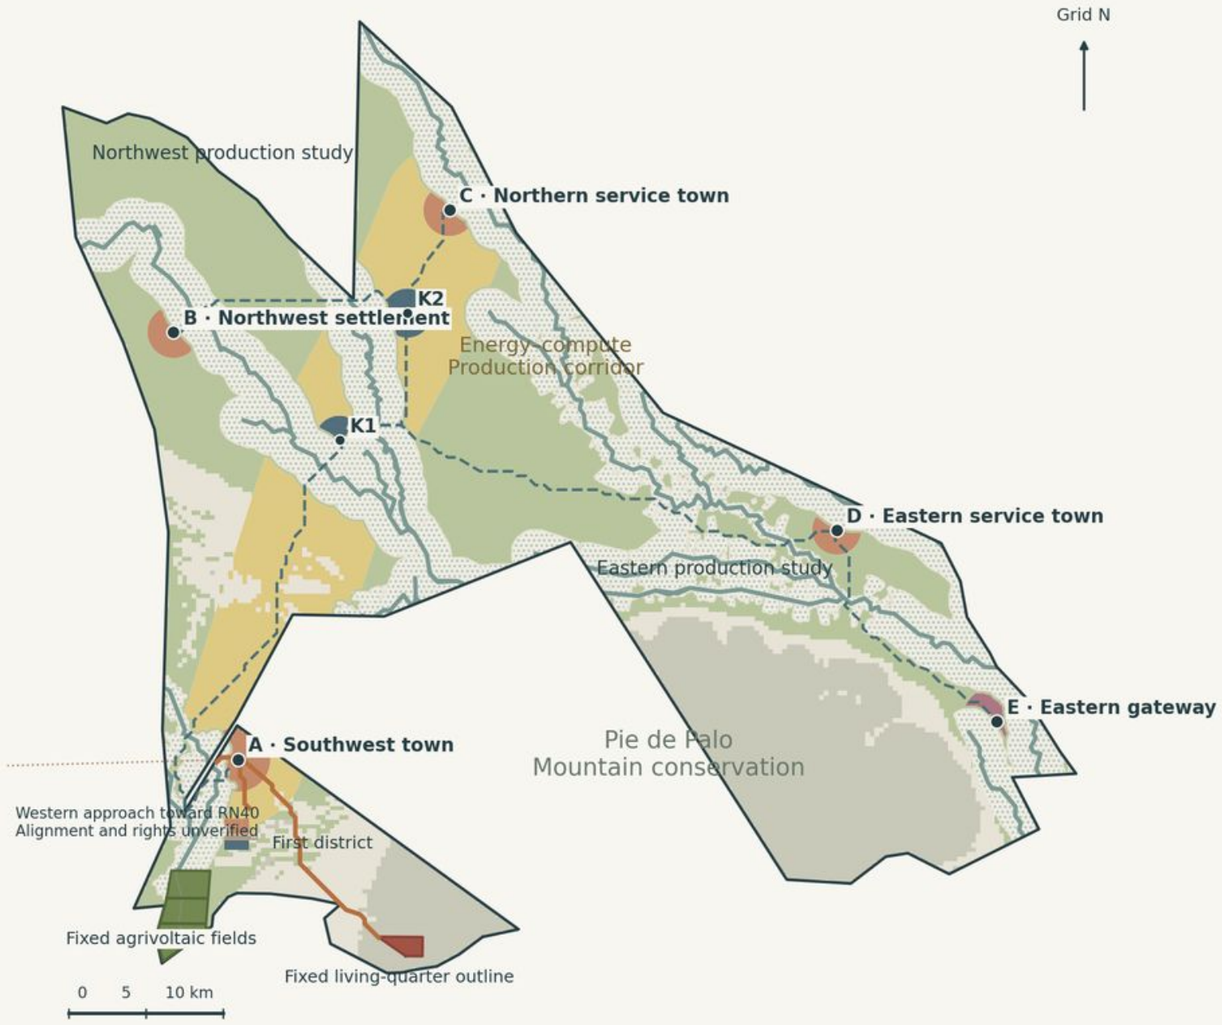

Declared trade-off: Maximum uninterrupted compute throughput and minimum cooling electricity

Sources: parcels and pilot area - XCITY (owner KML); terrain and channels - produced using Copernicus WorldDEM-30 (c) DLR e.V. 2010-2014 and (c) Airbus Defence and Space GmbH 2014-2018 provided under COPERNICUS by the European Union and ESA; all rights reserved; roads (c) OpenStreetMap contributors. AGUA FINITA | The Finite Water City

AGUA FINITA / Whole-site structure

XCITY OPEN AGENT CALL · Jingyuan Huang · 2026-10-26 · V3 REVIEW

Mountain/slope conservation study
Channel-conveyance study
Flood screening (unverified)
Fixed agrivoltaic fields
Fixed living-quarter outline
Town reservation
Compute/maintenance reserve
Gateway/export industry
Initial processing/repair
Energy-led production
Low-slope production study
Retained dryland

Sources: XCITY c60cd1d; competition boundary, fixed pilots, 60 m Copernicus DEM and derived drainage screening. Reservations are concepts; 300 m corridor routing is not road engineering.

One site, phased delivery

1,656 km² whole-site framework · V3 review

01 Start beside fixed systems

Retain fixed fields and living quarter. Secure access, maintenance, water and public services for the southwest.

02 Towns on western low slopes

A southwest town; B northwest settlement;
C northern farm-service town. Productive land separates them.

03 Productive corridors, inhabited places

K1/K2 cluster compute, repair and heat use.
Energy/production links avoid mountains and channels.

04 Route around the range; defer the gateway

D eastern service town links to E gateway/industry.
Study the northern low slopes, not a mountain shortcut.

Study extent ≠ built capacity

Colours show priorities and conditional reservations, not whole-site building, irrigation or secured resources.

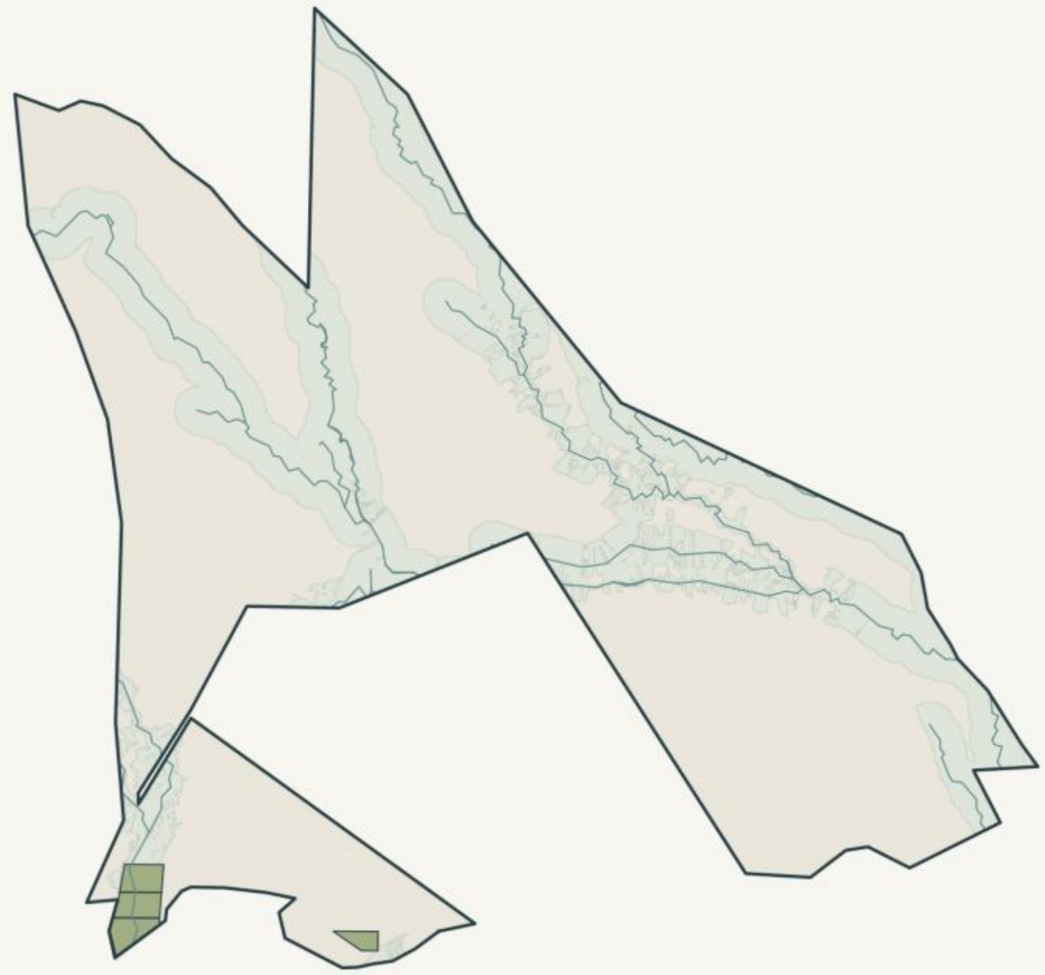

Sources: parcels and pilot area - XCITY (owner KML); terrain and channels - produced using Copernicus WorldDEM-30 (c) DLR e.V. 2010-2014 and (c) Airbus Defence and Space GmbH 2014-2018 provided under COPERNICUS by the European Union and ESA; all rights reserved; roads (c) OpenStreetMap contributors. Everything else: this submission's own geometry.

AGUA FINITA | The Finite Water City

Drawn by the entrant

Read the site before shaping the city

Separate fixed context, terrain screening and regional links; screening is not a lake.

Fixed starting conditions

Fixed fields and the living quarter occupy different places. Verify access and demand separately.

Screening is not a no-build boundary

DEM channels and about 503 km² of screening; surveyed flood limits and design flows are absent.

Terrain shapes the eastern route

Study the northern low-slope approach; do not invent a shortcut through the mountains.

Access is a project in itself

No national/provincial route enters the supplied site extract. External alignment, rights and crossings remain unverified.

AGUA FINITA | Jingyuan Huang | 2026-10-26 | Concept design; own geometry and declared assumptions, not survey or approval.

Sources: parcels and pilot area - XCITY (owner KML); terrain and channels - produced using Copernicus WorldDEM-30 (c) DLR e.V. 2010-2014 and (c) Airbus Defence and Space GmbH 2014-2018 provided under COPERNICUS by the European Union and ESA; all rights reserved; roads (c) OpenStreetMap contributors. AGUA FINITA | The Finite Water City

Drawn by the entrant

Why start in the southwest rather than at the eastern gateway?

Compare fixed systems, complete daily life, access and secured resources; no invented aggregate scores.

Decision	Southwest first district (selected)	West-central compute corridor (conditional)	Eastern gateway (later)
Fixed systems	Near fixed fields; connect separately to the living quarter	Potential energy and maintenance clusters	Far from initial public services
Daily life	Housing, school and clinic start together	Production and servicing first	An export park cannot replace a complete neighbourhood
Terrain and channels	Buildings on eastern terraces; retreat from channels	Screen successive low-slope areas outside sensitivity bands	Route north of the range; verify eastern terraces
Resource limits	Verify initial water rights and electricity first	Capacity and contracted demand trigger expansion	Start only when trade, engineering and resources align
Accepted trade-off	Give up the image of simultaneous whole-site development	Long productive gaps between settlements	The indicative 7 km² still requires land verification

AGUA FINITA | Jingyuan Huang | 2026-10-26 | Concept design; own geometry and declared assumptions, not survey or approval.

AGUA FINITA | The Finite Water City

Drawn by the entrant

Five systems are more than five unrelated colours

Energy and compute support production; secured water, services and maintenance govern growth.

Sequence: verify lawful water, power and services → contract interruptible production → audit before expansion.

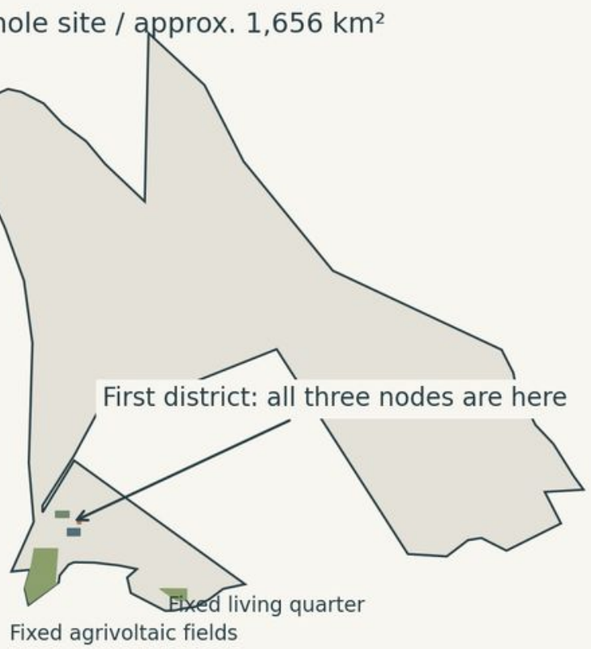

AGUA FINITA | Jingyuan Huang | 2026-10-26 | Concept design; own geometry and declared assumptions, not survey or approval.

Sources: parcels and pilot area - XCITY (owner KML); terrain and channels - produced using Copernicus WorldDEM-30 (c) DLR e.V. 2010-2014 and (c) Airbus Defence and Space GmbH 2014-2018 provided under COPERNICUS by the European Union and ESA; all rights reserved; roads (c) OpenStreetMap contributors. AGUA FINITA | The Finite Water City

Where are the three nodes?

Whole site → southwest first district → three connected design tests

First district: production, channels and daily life

B03 · Southern production edge

Compute, repair and heat receivers are adjacent.

C03 · Northwest seasonal channel

Keep the dry channel; public use retreats uphill.

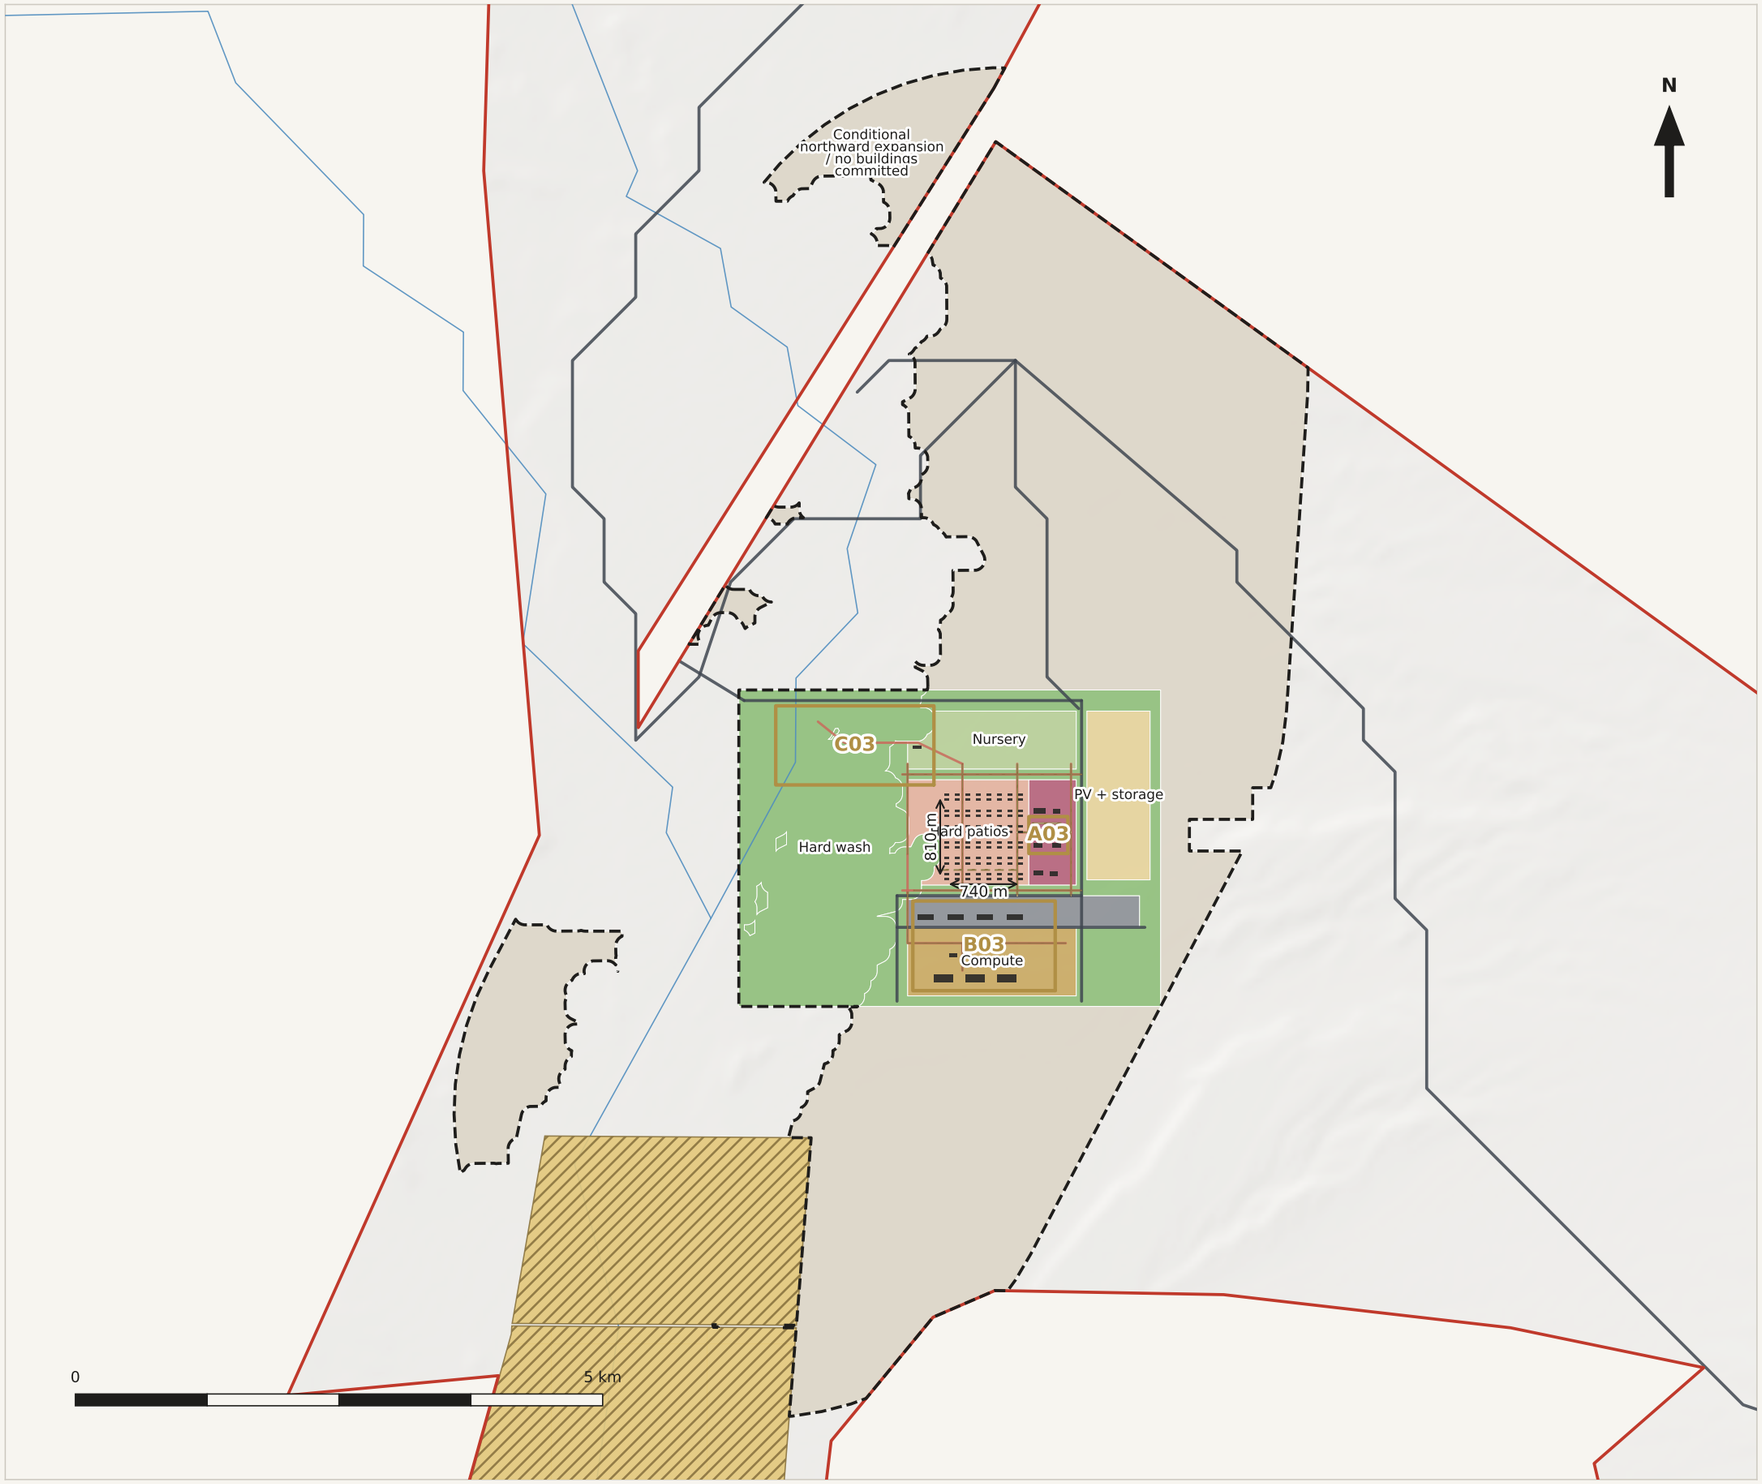

A03 · Civic core east of housing

Kitchen, library and shade sustain everyday use.

Sources: parcels and pilot area - XCITY (owner KML); terrain and channels - produced using Copernicus WorldDEM-30 (c) DLR e.V. 2010-2014 and (c) Airbus Defence and Space GmbH 2014-2018 provided under COPERNICUS by the European Union and ESA; all rights reserved; roads (c) OpenStreetMap contributors. AGUA FINITA | The Finite Water City

Drawn by the entrant

First district: homes, public life and production interfaces

Building positions are unchanged; wider reservations are not completed urban design.

Complete daily life first

Model targets: 960 homes and 2,400 new residents. School, clinic and daily shops open together.

Public routes link daily needs

Homes → public kitchen / library → shade. Walking does not cut through compute service yards.

Jobs along the production edge

Compute, processing, repairs and water maintenance provide initial jobs; machines enter from the service edge.

Separate initial and study extents

The roughly 40 km² study envelope includes conditional reserves not yet designed as blocks.

AGUA FINITA | Jingyuan Huang | 2026-10-26 | Concept design; own geometry and declared assumptions, not survey or approval.

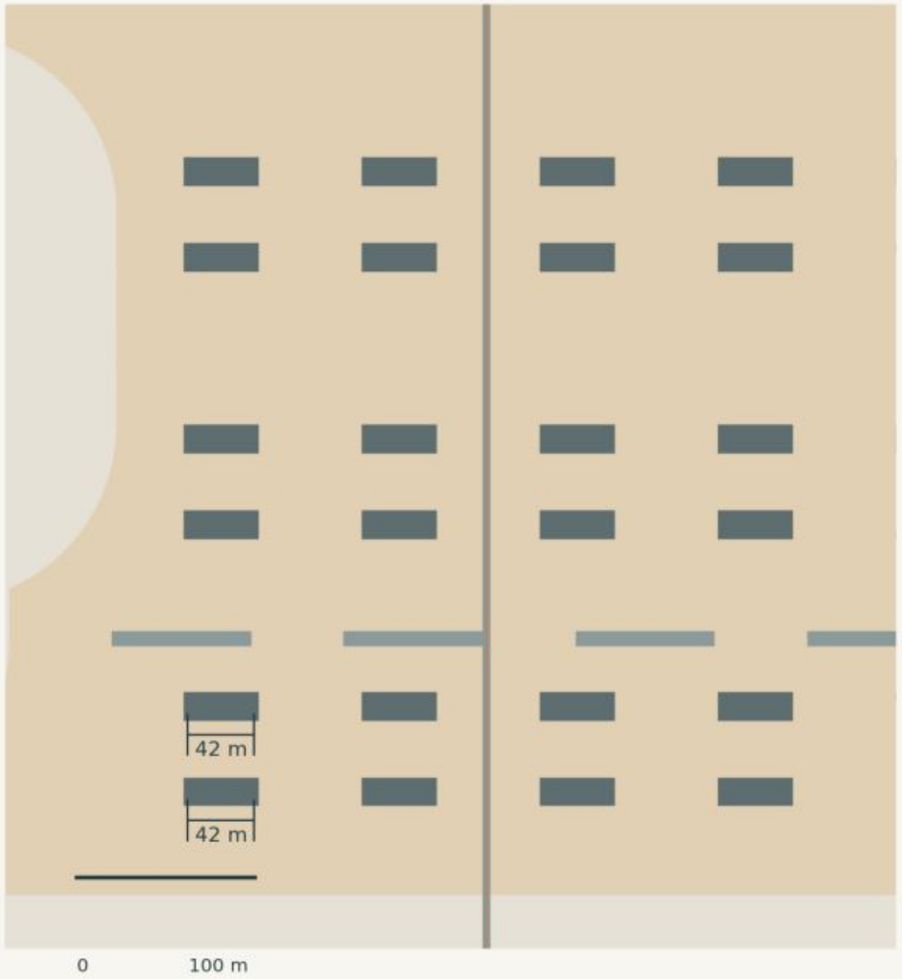

Sources: parcels and pilot area - XCITY (owner KML); terrain and channels - produced using Copernicus WorldDEM-30 (c) DLR e.V. 2010-2014 and (c) Airbus Defence and Space GmbH 2014-2018 provided under COPERNICUS by the European Union and ESA; all rights reserved; roads (c) OpenStreetMap contributors. AGUA FINITA | The Finite Water City

Drawn by the entrant

Housing clusters: from front door to public route

Three-storey bars and continuous shaded routes: a tested block fragment, not a standard sale product.

Housing dimensions

Typical bar: 42 × 16 m, three floors, 10 homes. 96 × 10 = 960 homes; assume 2.5 people per home.

People and shared space

Ground space supports shared activity and arrival. Route shade does not replace indoor heat refuge.

Servicing and quiet edges

Delivery, emergency access and repair enter at the edge. Doors, accessibility and parking need further design.

Further design tests

Counts alone do not establish housing quality. Test doors, service routes, thermal comfort and maintenance.

AGUA FINITA | Jingyuan Huang | 2026-10-26 | Concept design; own geometry and declared assumptions, not survey or approval.

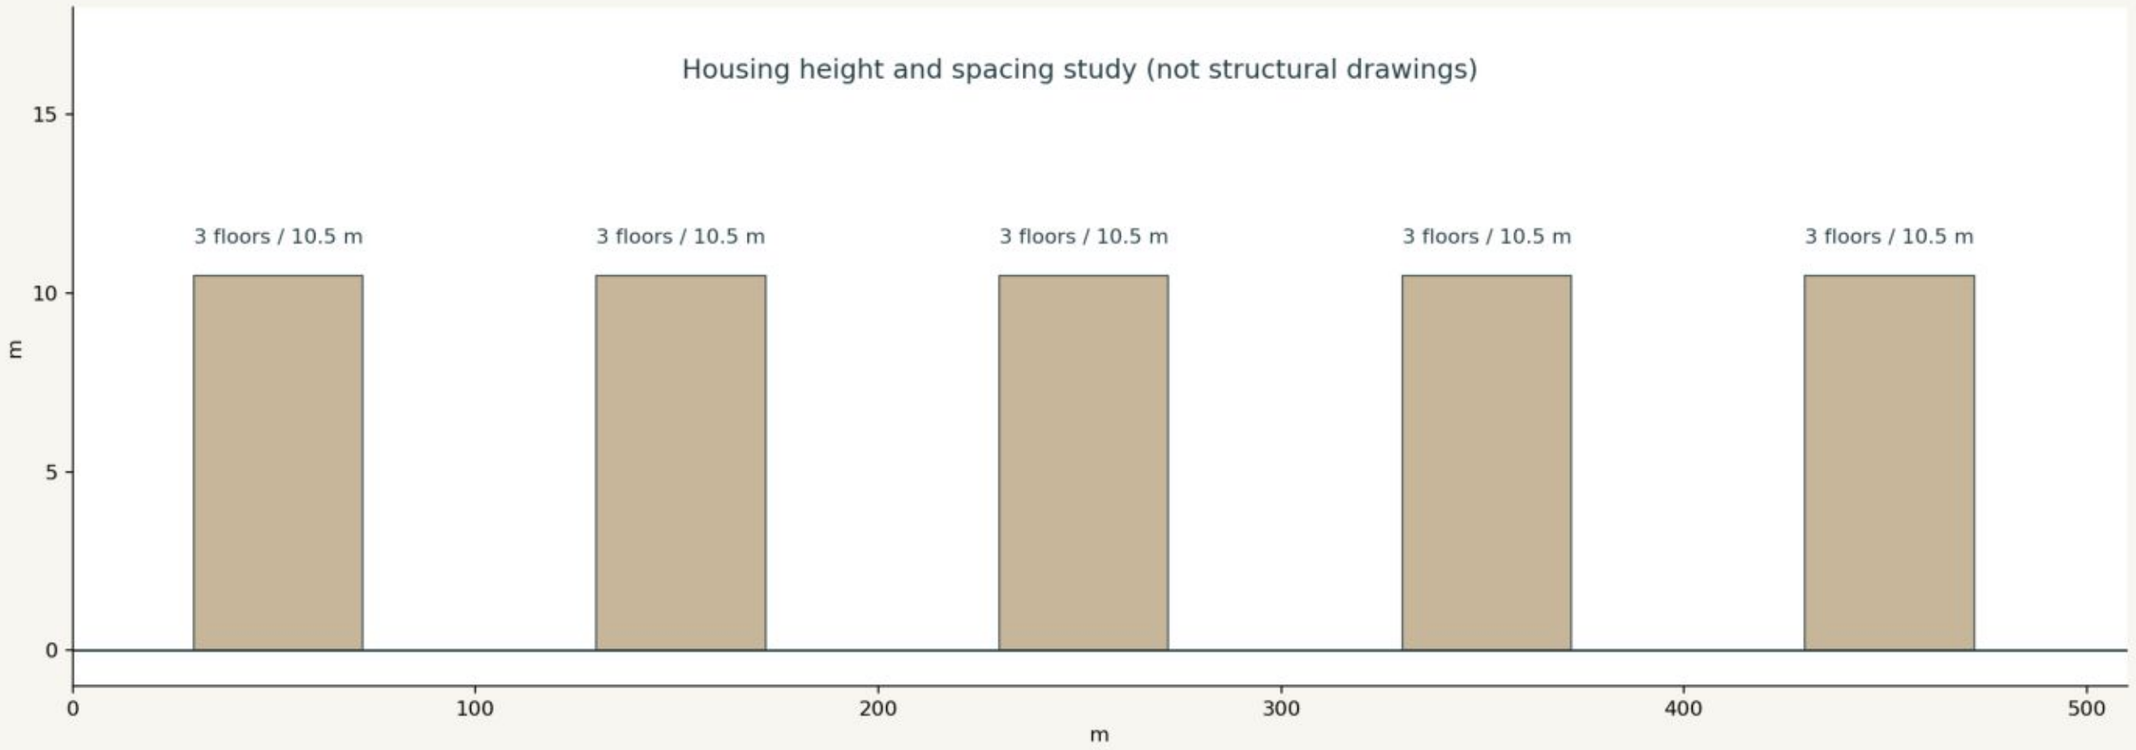

Sources: parcels and pilot area - XCITY (owner KML); terrain and channels - produced using Copernicus WorldDEM-30 (c) DLR e.V. 2010-2014 and (c) Airbus Defence and Space GmbH 2014-2018 provided under COPERNICUS by the European Union and ESA; all rights reserved; roads (c) OpenStreetMap contributors. Everything else: this submission's own geometry.

AGUA FINITA | The Finite Water City

Drawn by the entrant

Heights and interfaces: low-rise forms and light shade roofs

Seismic, heat and maintenance considerations; shown heights come from submitted building attributes.

Regular lateral systems + replaceable light roofs + low-glare lighting + accessible indoor heat refuges

Modelled heights do not resolve drift, seismic joints, foundations, roof spans or fire evacuation.

AGUA FINITA | Jingyuan Huang | 2026-10-26 | Concept design; own geometry and declared assumptions, not survey or approval.

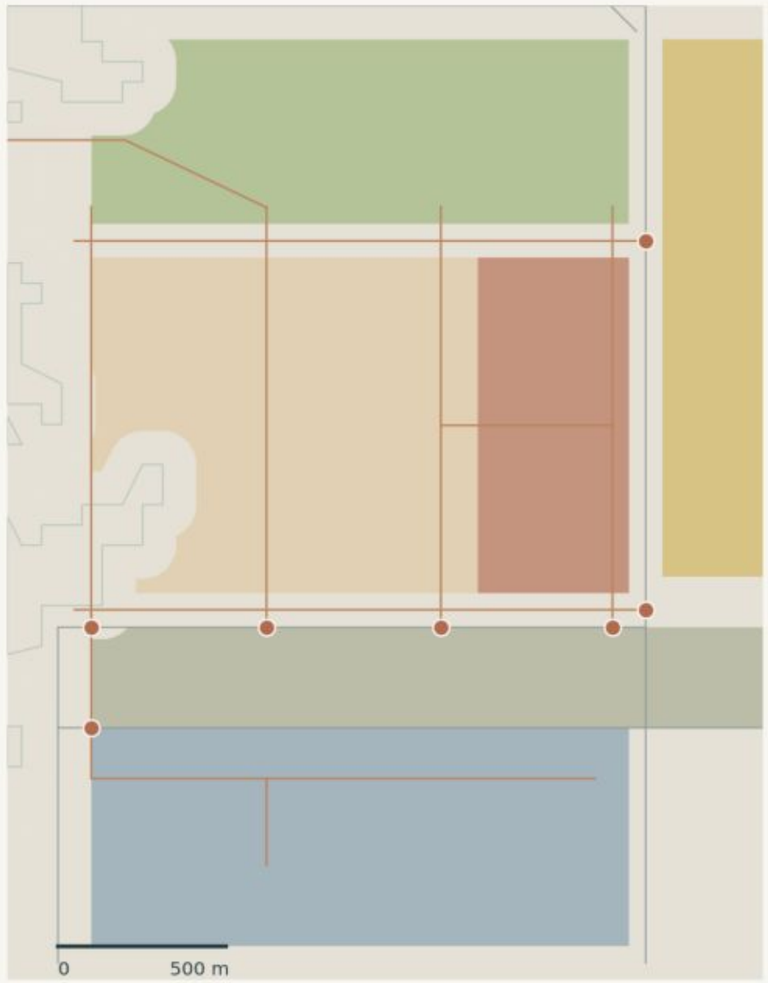

Sources: parcels and pilot area - XCITY (owner KML); terrain and channels - produced using Copernicus WorldDEM-30 (c) DLR e.V. 2010-2014 and (c) Airbus Defence and Space GmbH 2014-2018 provided under COPERNICUS by the European Union and ESA; all rights reserved; roads (c) OpenStreetMap contributors. AGUA FINITA | The Finite Water City

Drawn by the entrant

People and machines: locate every registered interface

Machines use regional/service routes; at-grade meetings with public paths are registered.

Seven registered interfaces

Current geometry count, not a risk score. Check stops, loading points and service entrances too.

People first; accountable control

Gates, yielding and on-site manual release. AI cannot override pedestrian priority or emergency rules.

Regional links are not local streets

The fixed-quarter connection is transport, not a substitute for local everyday services.

Check real doors and access

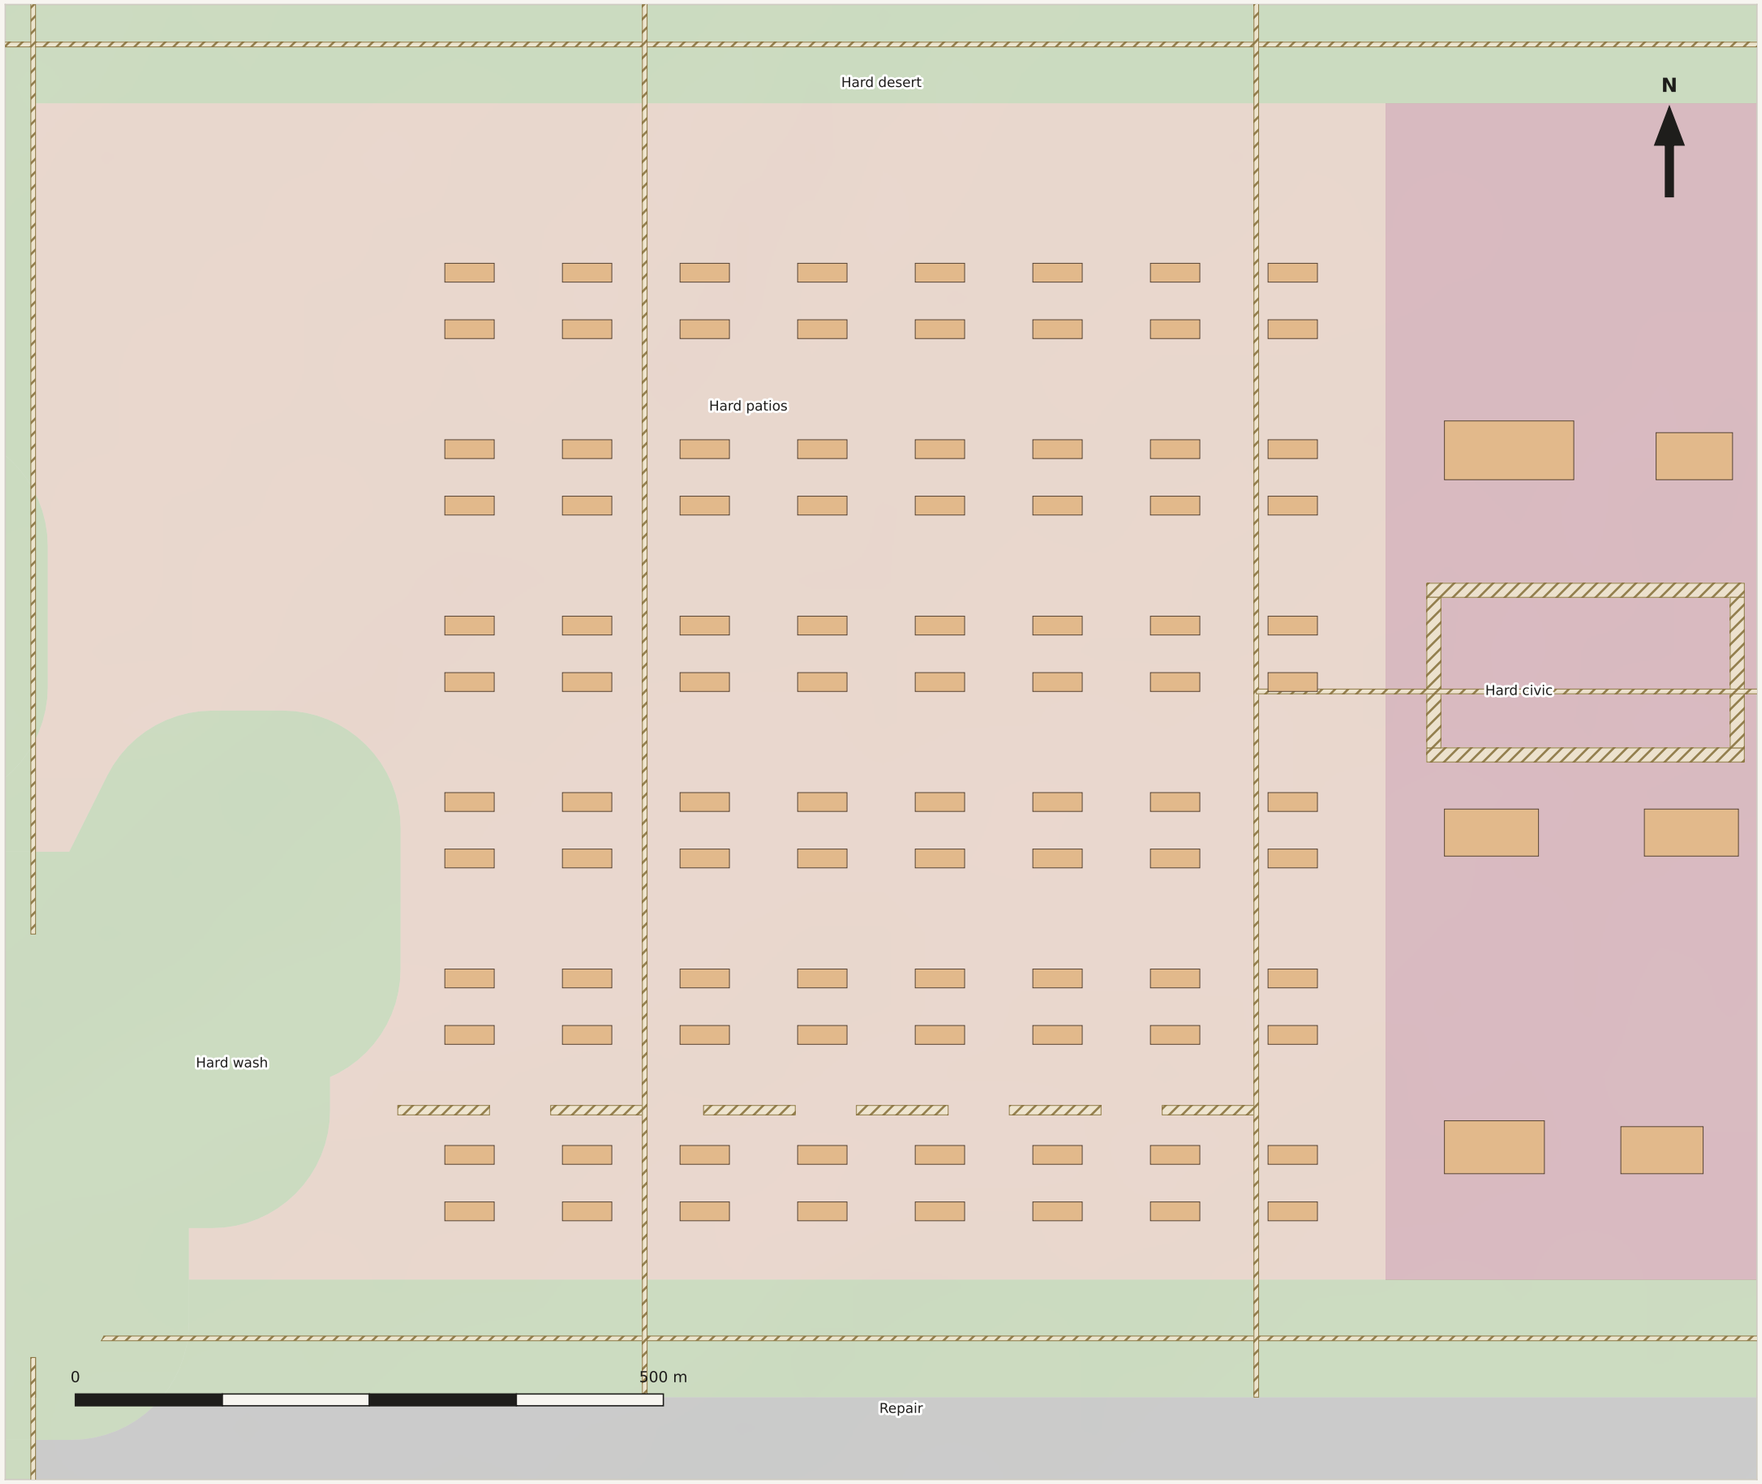

Verify accessible paths, service turns, emergency stops and engineered gradients.

AGUA FINITA | The Finite Water City

Drawn by the entrant

A03 · Use and operation: normal, extreme and recovery

Everyday use and abnormal operation constrain one another; unverified performance is not claimed as achieved.

Early morning

Walking, shopping and meeting

Use connected shade roofs and the public kitchen.

Heat / strong dust winds

Reduce outdoor stays

Shade does not guarantee safety; move to accessible indoor refuge.

Evening

Public activity, reading and care

Low-glare route lighting; no large screens or uplighting.

Outage / equipment failure

Keep basic access and manual service

Manual controls, emergency drinking water and staff takeover.

In every state: locate users, name the shutdown authority, provide help and verify before restarting.

AGUA FINITA | The Finite Water City

Drawn by the entrant

C03 · Use and operation: normal, extreme and recovery

Everyday use and abnormal operation constrain one another; unverified performance is not claimed as achieved.

Dry everyday use

Observation, walking and water education

The classroom is on high ground; channels retain their dry landscape.

Upstream warning

Close low paths and guide retreat

Duty staff control closure; do not wait for rain at the site.

During floods

Low areas closed

No design flow is supplied; the model does not certify protection.

After recession

Inspect erosion, sediment and path damage

Maintenance staff inspect before reopening; no automatic unlock.

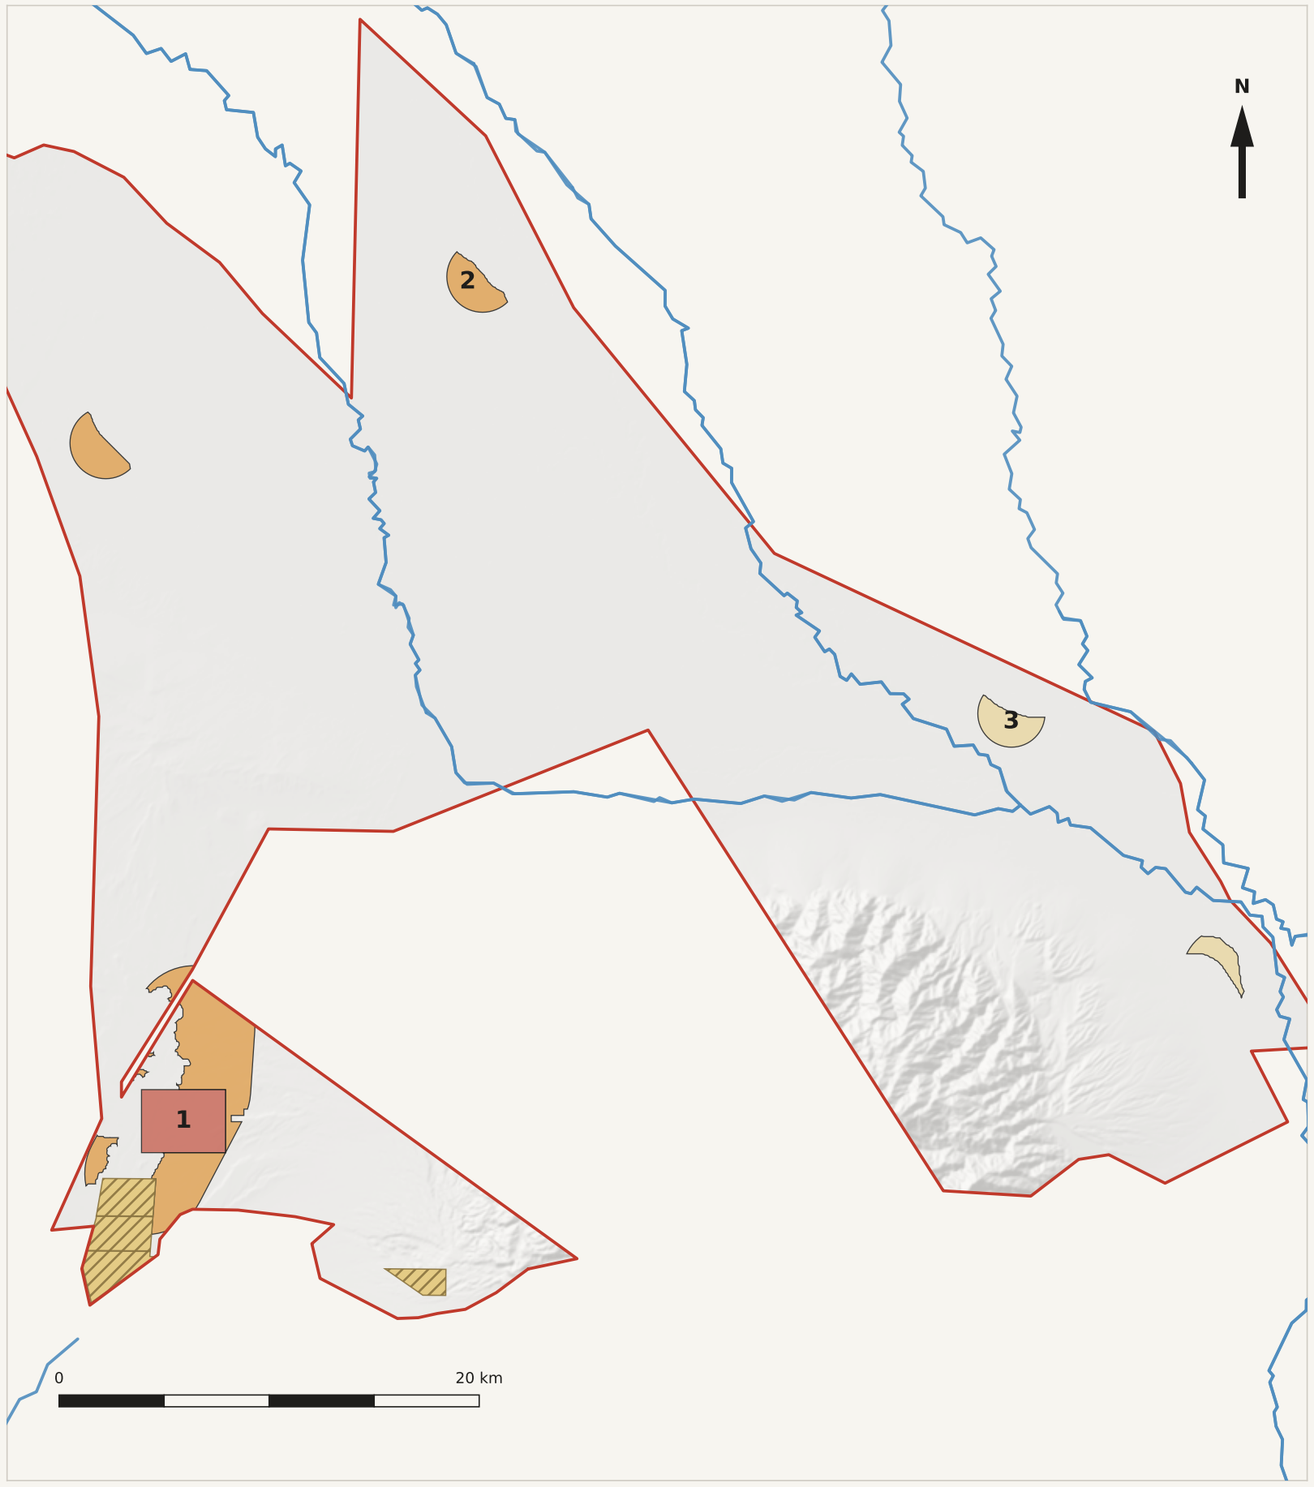

In every state: locate users, name the shutdown authority, provide help and verify before restarting.

AGUA FINITA | The Finite Water City

Drawn by the entrant

Water budget: protect daily life before expanding production

Assumed gross use: 1,000,000 m³/yr. Reuse is internal transfer, not another external water source.

Agriculture + cleaning 778,263.2 m³/yr

Residents + civic services 140,160.0 m³/yr

Industry 60,000.0 m³/yr

Landscape 20,000.0 m³/yr

Compute make-up 1,576.8 m³/yr

External input

840,000 m³ fresh input less 40,000 losses: 800,000 reaches use, plus 200,000 internal reuse.

Protect the fixed agriculture allowance

600,000 m³ is an unverified pilot allowance. If actual use is higher, reduce new discretionary uses first.

What a 30% shortfall costs

Cut landscape by 20,000; new irrigation/cleaning by 178,263.2; industry by 40,000; non-essential domestic use by 61,736.8 m³.

An unresolved demand gap

Fixed living-quarter demand is absent. This budget does not cover the entire future city.

If basic demand cannot be met, secure emergency water or delay occupancy; arithmetic does not supply water.

Energy: night tests the promise more than daylight

An 8,760-hour synthetic scenario, not measured weather, a grid agreement or achieved performance.

62.432%

Share of hours fully matched by clean supply; not the annual clean-energy share.

72.993%

Separate clean-energy share. Unverified grid imports receive no clean credit.

Model inputs

Assume 40 MW PV, 480 MWh storage, 12 MW peak IT and PUE 1.25.

Storage starts at its protected reserve: 216 MWh deliverable emergency energy is not free initial clean supply.

Sources: parcels and pilot area - XCITY (owner KML); terrain and channels - produced using Copernicus WorldDEM-30 (c) DLR e.V. 2010-2014 and (c) Airbus Defence and Space GmbH 2014-2018 provided under COPERNICUS by the European Union and ESA; all rights reserved; roads (c) OpenStreetMap contributors. Who authorises growth and pays for downtime and maintenance?

Critical city utilities must survive any single compute operator.

Public utility + community trust

Retain land, utilities, metering and public access. Publish aggregate water, power, storage and compute accounts.

Compute operator

Contract interruptible service and maintain equipment. Provide transferable interfaces and safe exit arrangements.

Residents, workers + independent audit

Participate in service priorities and appeals without personal tracking. Independent audit checks meters, calculations and growth conditions.

AI advises dispatch; it cannot authorise expansion, alter essential water allocations or override pedestrian priority.
