THE EVERYDAY CITY

Overall study
- Reserve 905 km²
- Agri-production 674 km²
- Energy + compute 57 km²
- Living + public life 16 km²
- Trade + port 4.80 km²
- Site boundary (1,656 km²)
- Pilot area - fixed, not designed
- Master design area
- Seasonal channels (DEM-derived)
- Key nodes

Summary

A city organised around homes, shared courts and everyday public services. Six neighbourhoods form a complete first district; energy, compute and farm services support its edges. The whole-site network grows through two conditional service towns and a later eastern gateway.

Declared trade-off

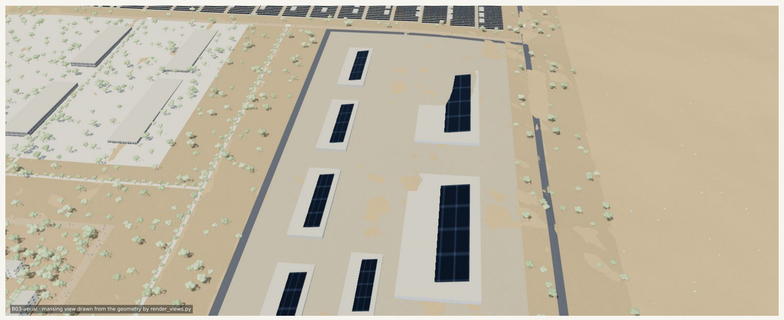

Maximum uninterrupted compute throughput and minimum productive-route length. Why: Independent housing, public life and a clear service boundary take precedence.. Who bears it: Compute investors and operators through interruption contracts; public-service funding must not depend on uninterrupted IT revenue.

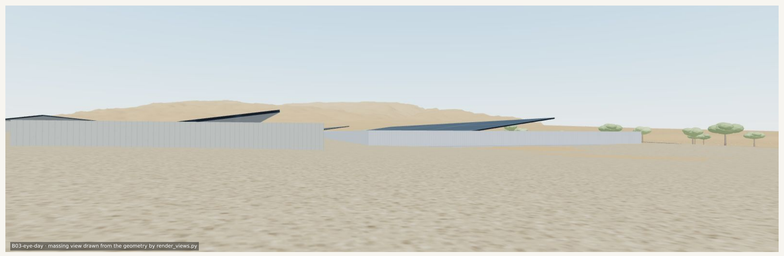

A01 A future housing prototype

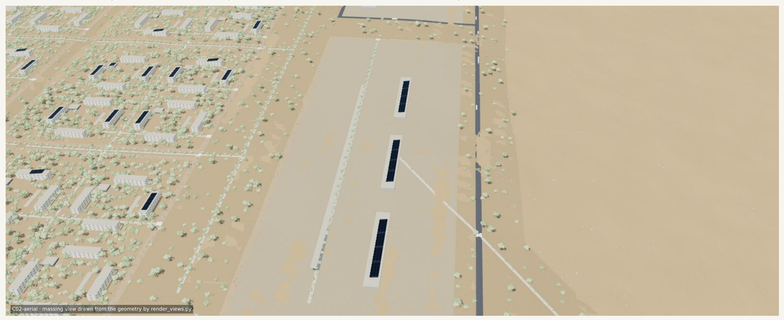

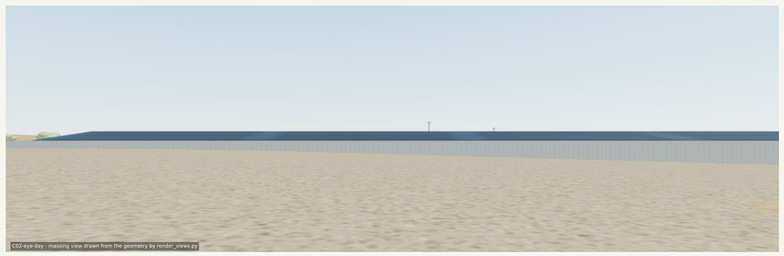

B03 A compute campus and its waste heat

C02 The edge between agrivoltaic fields and the city
