AGUA FINITA

CONTINUOUS LIVING DISTRICTS / INDEPENDENT PRODUCTION / CONNECTED PUBLIC LANDSCAPE

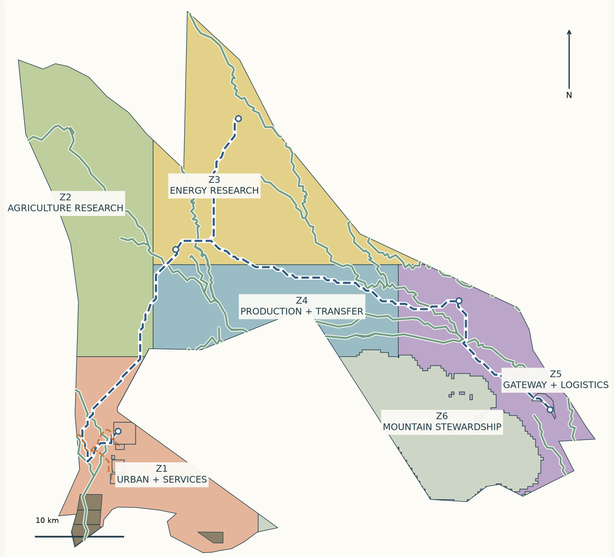

JINGYUAN HUANG

27 OCT 2026 / V11

CENTRE DISTRICT / LOCAL AERIAL / AI-ENHANCED CONCEPT

WHOLE-SITE ZONING + ROAD FRAMEWORK

Z1 / Southwest urban and service

232.6 km2 gross / proposed role

Z2 / Northwest agricultural research

341.2 km2 gross / proposed role

Z3 / Northern energy research

392.3 km2 gross / proposed role

Z4 / Central production and transfer

238.2 km2 gross / proposed role

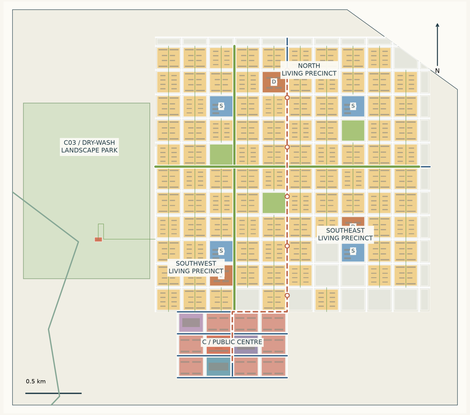

Z5 / Eastern gateway and logistics

227.5 km2 gross / proposed role

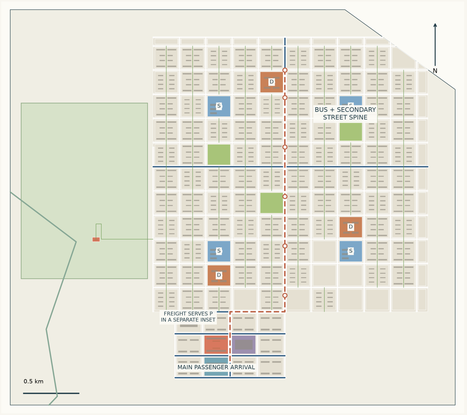

Z6 / Southeast mountain stewardship

226.1 km2 gross / proposed role

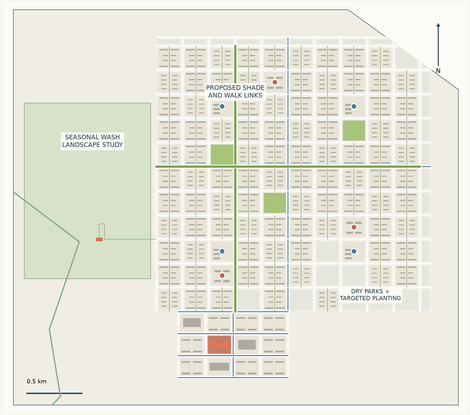

URBAN SPATIAL STRUCTURE

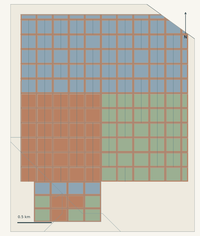

STREETS + PUBLIC CENTRES

LANDSCAPE + SHADE LINKS

THREE CONDITIONAL STAGES

P1 / 7,040 residents / 2,816 homes

Years 0-5: access, supply and essential services before occupancy.

P2 / 13,480 residents / 5,392 homes

Years 5-10: connected expansion; demand and resource headroom verified.

P3 / 25,600 residents / 10,240 homes

Years 10-20: complete northern precinct; gateway rights and services first.

Living precincts

Mixed/public centre

Schools + care

Dry parks

Primary/secondary streets

Proposed passenger spine

Proposed walk/shade links

Seasonal wash landscape

A03 / Market commons and climate refuge

Public space in heat and Zonda wind / C centre / Phase 1

LOCAL AERIAL

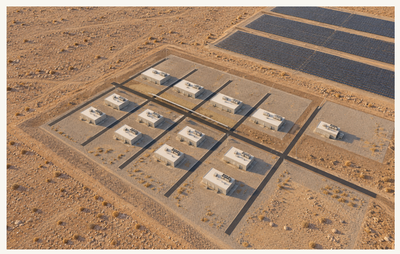

EYE-LEVEL USE

Morning market setup; daytime visits and refuge; evening social use. Staff open the indoor refuge and manage events. Shade is provided by roofs, not an assumed irrigated canopy.

B03 / Compute and repair precinct

A compute campus and its waste heat / P productive estate / phased 2-4-8 MW scenario

LOCAL AERIAL

EYE-LEVEL USE

The worker path runs parallel to the service spine; controlled yard-spur crossings still require detailed design. Freight remains on the machine network. Curtailable IT follows the energy account; dry cooling and metering precede expansion. No unverified residential heat benefit is claimed.

C03 / Seasonal wash visitor edge

A seasonal river park / Western seasonal channel / Phase 2

LOCAL AERIAL

EYE-LEVEL USE

Dry-season walking and observation use the eastern edge. The path and shade point are removable. Access closes on warnings; no occupied building or dam is placed on the source channel. Surveys and hydraulic design must set safe levels.

Whole-site boundary, named regions and road studies remain explicit. Green marks dry landscape, public parks and proposed walking/shade roles; planting remains conditional on the water budget. The hero is a LOCAL aerial. Detailed capacity, resource and zone-phase accounts are retained in the booklet and technical records, not a spreadsheet on this board.
